

Instructions of use

Version 1.1, September 2018

Product name: Brom Tabs 20

Use: Disinfection

Description

Bromine tablets of 20 g for continuous disinfection of swimming pools and spas.

Instructions of use

Apply by means of an adequate brominator. Bromine tablets should not be added directly to the pool or through the skimmers! Contact Norlex for more information on brominator solutions.

The pH should be maintained between 7.4 and 7.8 with a concentration of bromine between 1 and 3 ppm for pools and 2 and 4 ppm for spas.

Attention: the dissolution speed may vary widely depending on the strength of the water flow, temperature etc. Only by regularly measuring the bromine level the precise dosage required can be determined.

Once a week a shock-treatment with calciumhypochlorite, should be carried out in order to regenerate bromides.

Note: Bromine tablets may gradually change colour from white to orange. This is normal and does not influence the disinfection power.

Use of Brom Tabs 20 in spas has the benefit compared to Spa Tabs 20, that it does not give the strong chlorine smell generated by the stabilised trichlor.

Use before: see date on the packaging.

Before using this product, please read the instructions and safety data sheet.
