

# NORLEX

## POOL & SPA

### Instructions of use

Version 1.1, September 2018

## Product name: Granulate

### Use: Disinfection.

#### Description

Granulate dissolves quickly which makes it particularly suitable for shock treatment, though it can also be used for continuous disinfection. The product should not be used in hard water (in case of hard water we recommend our organic chlorine products). It can be dosed via the skimmer or by means of a suitable dosing device.

#### Instructions of use

Continuous disinfection:

Stabilized water: 20-30 g per 10 m<sup>3</sup> of water every 1 or 2 days.

Non-stabilized water: 30-50 g per 10 m<sup>3</sup> of water every day (divided into 2 equal doses morning and evening).

Shock treatment/presence of algae: 50-80 g per 10 m<sup>3</sup> of water. After a shock treatment the pool should not be used for several hours. Dosages may vary widely (sunlight, bathing load etc.).

Maintain the chlorine level between 1 and 2 ppm in stabilized water, and between 0,5 and 1 ppm in unstabilized water.

#### Dosage Calculation

16 g of product in 10 m<sup>3</sup> of water will increase the chlorine level by 1 ppm (mg/l). See below table for examples of dosage needed to maintain the chlorine levels.

Generally, the pH should be maintained between 7,2 and 7,6.

Pool volume	Amount of Granulate to maintain chlorine content by specified ppm				
	0,5 ppm	1 ppm	1,5 ppm	2 ppm	2,5 ppm
15 m <sup>3</sup>	12 g	24 g	36 g	48 g	60 g
20 m <sup>3</sup>	16 g	32 g	48 g	64 g	80 g
25 m <sup>3</sup>	20 g	40 g	60 g	80 g	100 g
30 m <sup>3</sup>	24 g	48 g	72 g	96 g	120 g
35 m <sup>3</sup>	28 g	52 g	80 g	108 g	136 g

Use before: see date on the packaging.

Before using this product, please read the instructions and safety data sheet.
