

Instructions of use

Version 1.1, September 2018

Product name: Solufloc

Use: Flocculation.

Description

Solid flocculation tablets in a "sock" used for continuous dosing of flocculant to the pool. Flocculation combines fine particulates, that cannot be removed by the sand filter, into larger particles that can now be removed by the filter. The result is crystal clear water.

Instructions

1. Adjust pH level to 7.2 - 7.6.
2. Place 1 piece/sock "Solufloc" in the skimmer basket per 20-40 m³ of water and filter continuously.
3. "Solufloc" collects the fine suspended particles in the water into larger "flocks" that can easily be retained in the sand filter.
4. Collected pollutants and flocks are disposed of by normal backflush of the filter.

Before using the product, you should read the instructions and safety data sheet.
